

Southern Institute for Health Informatics 2005 Conference

Friday 30th September 2005
Richmond Building, University of Portsmouth

Theme

The theme for this, the seventh, SIHI conference is the contribution that Health Informatics could or should make to the Improvement Agenda in the National Health Service. One size no longer fits all. There are no "bog standard" hospitals. Each NHS organisation needs to find the best way of serving its community, whether that community is a traditional "local" one, or a more dispersed and perhaps specialised one. The conference will address these and related issues and showcase some recent developments (locally, nationally and internationally) that will contribute to improving care and patients' experience of the health service.

Speakers

The speakers will include:

- Jan Dowsett / David Lane, National Clinical Lead for Allied Health Professions / Clinical Benefits Advisor, Connecting for Health; Connecting for Health – Enabling Total Service Improvement
- Hugh Rogers, Associate for Service Transformation, NHS Institute for Innovation & Improvement; The big picture for improvement: making systems more reliable; linking innovation in service delivery with new technologies; involving and engaging all staff
- Di Millen, Head of Informatics, NHS Connecting for Health; Informatics capacity and capability building to support healthcare improvement
- Dr Glyn Hayes, President, UK Council for Health Informatics Professions and Chair, BCS Health Informatics Forum; The present and future of UKCHIP and the BCS Health Informatics Forum
- Sherrin Moss, Healthcare Markets Manager, BUPA; The Independent Sector's role in supporting the NHS improvement agenda - Challenges and Opportunities
- John Jeans, President, GE Healthcare UK; How can industry contribute to the NHS modernisation agenda?
- Prof Chris Johnson, Department of Computing Science, University of Glasgow; Safety critical aspects of health informatics systems
- Paul Crane-Whatmore / Anne Spencer, ICT Services Project Manager / Nursing & Midwifery Informatician; Portsmouth Hospitals Trust, Portsmouth's interim EPR developments
- Dr Martin Utley, Deputy Director, Clinical Operational Research Unit, UCL; Graphical methods for turning data into information
- Prof Gary Smith, Portsmouth Hospitals Trust & University of Bournemouth; Using information technology to improve the early identification and management of the sick patient
